AWS S3 Static Website Hosting

S3 Static Website Hosting

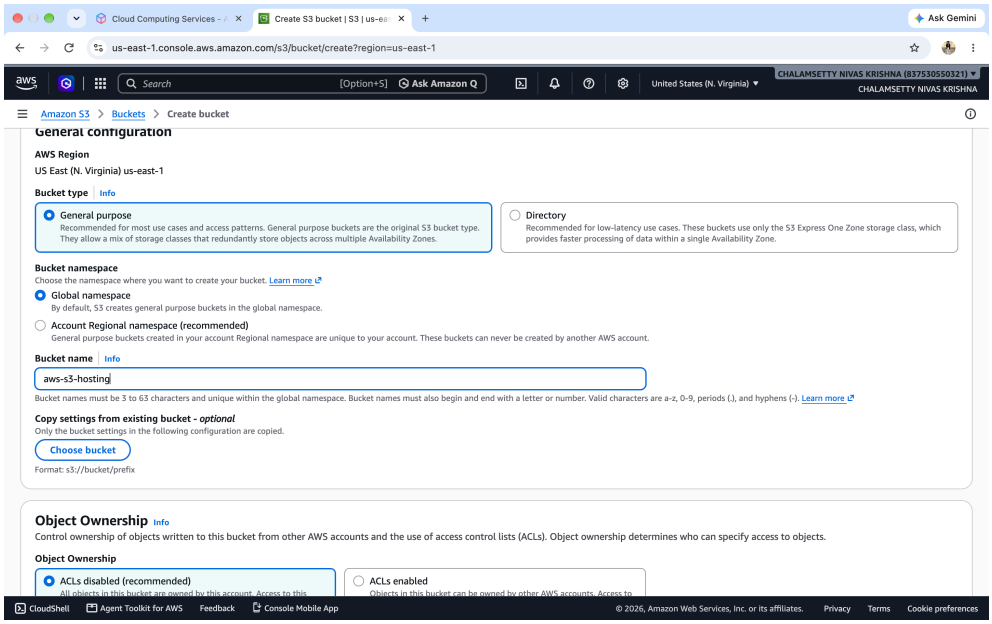

It allows you to host a static website using an Amazon S3 bucket without launching an EC2 server. Examples: a portfolio website, a company landing page, or a simple HTML/CSS website.

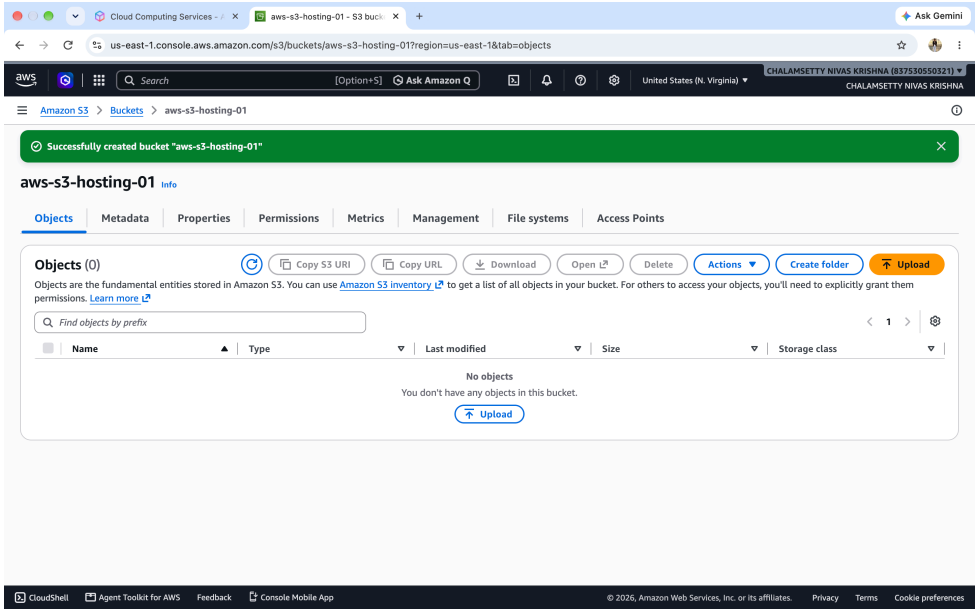

How it works:

You create an S3 bucket.
You upload website files such as `index.html`, `style.css`, and images.
You enable Static website hosting.
You configure permissions for public website access.
You open the website endpoint in your browser.

Create an S3 bucket

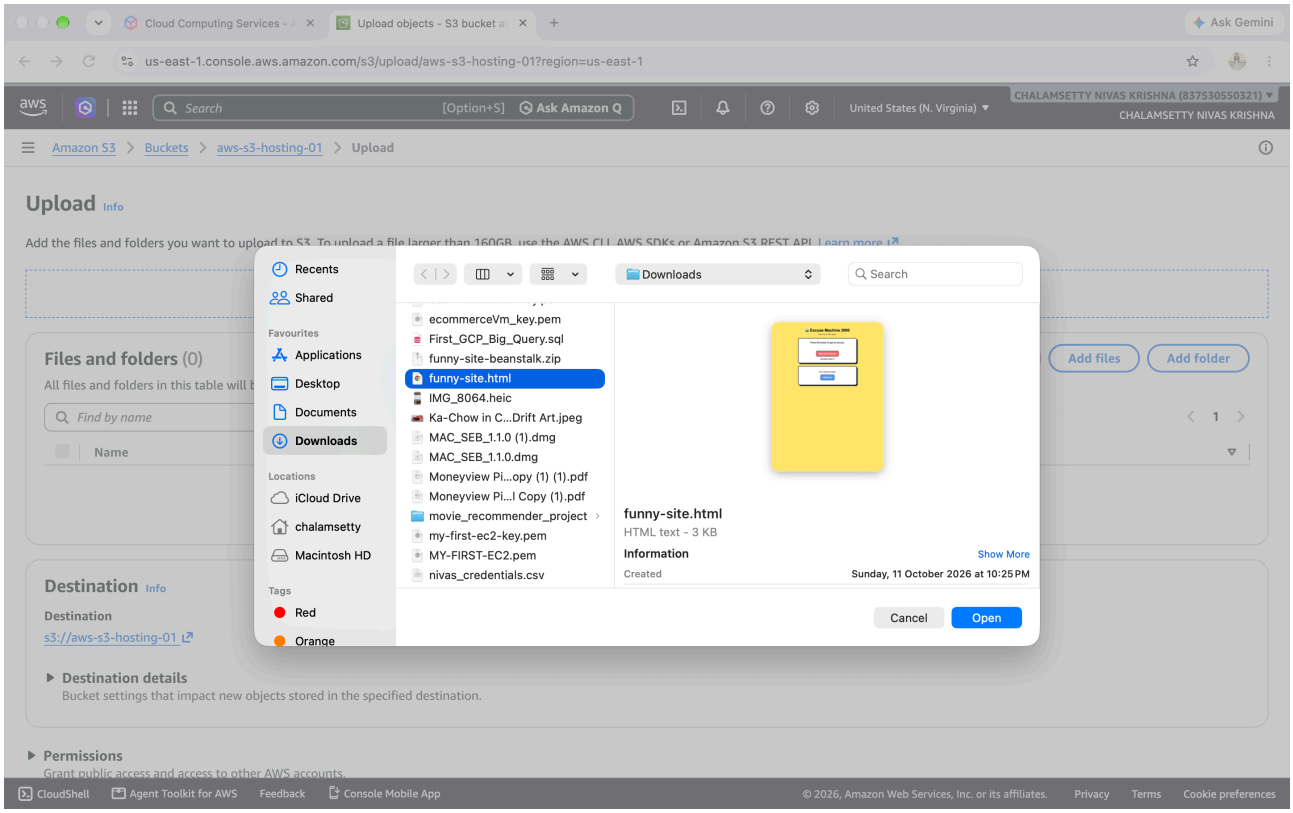

Bucket name aws-s3-hosing-01

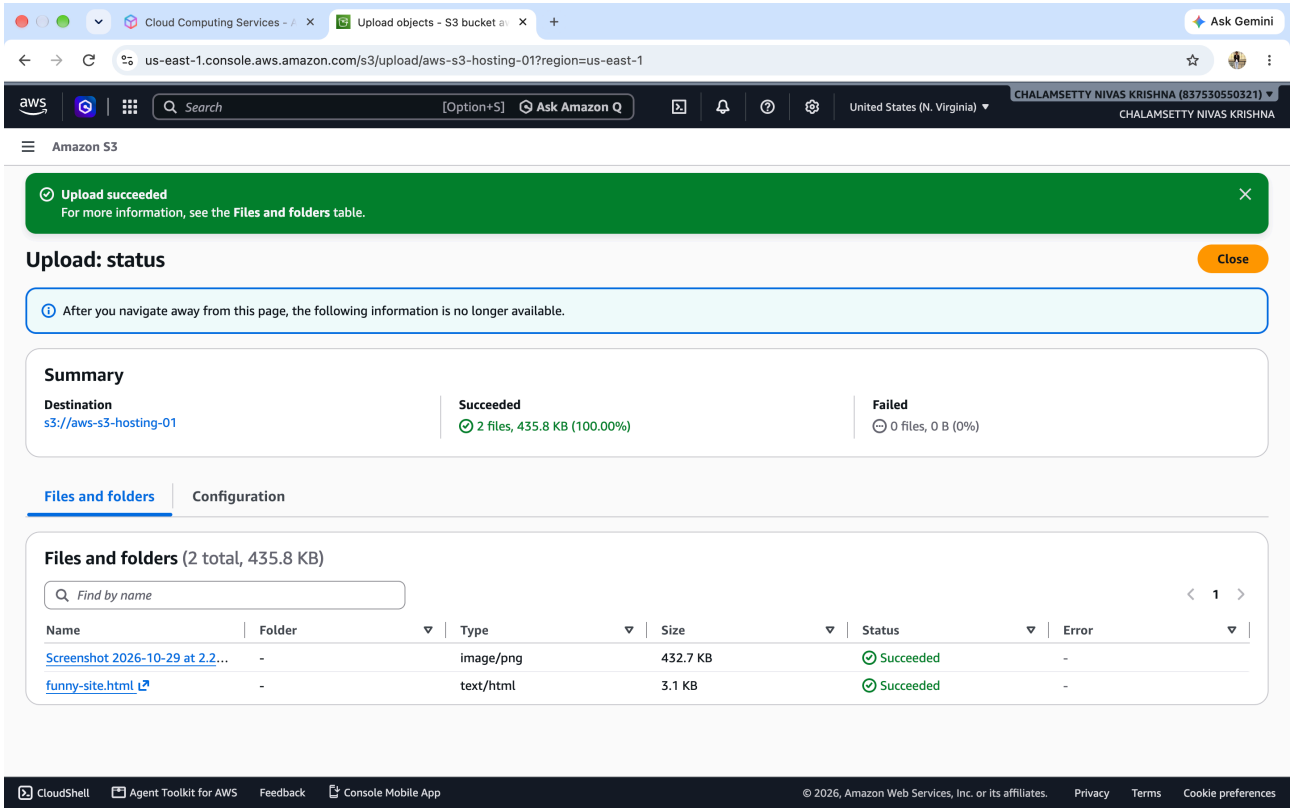

Upload website files

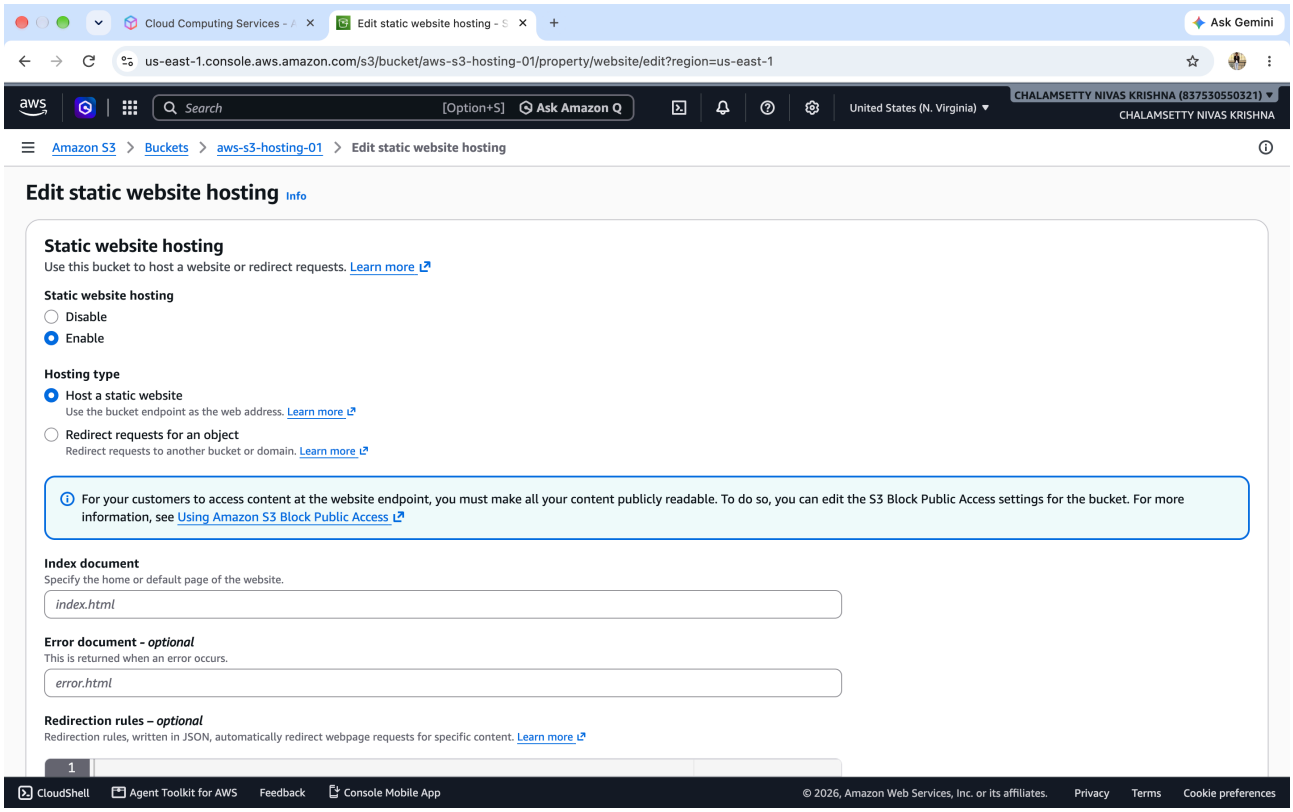

Create a file named `index.html` on your Mac with this content

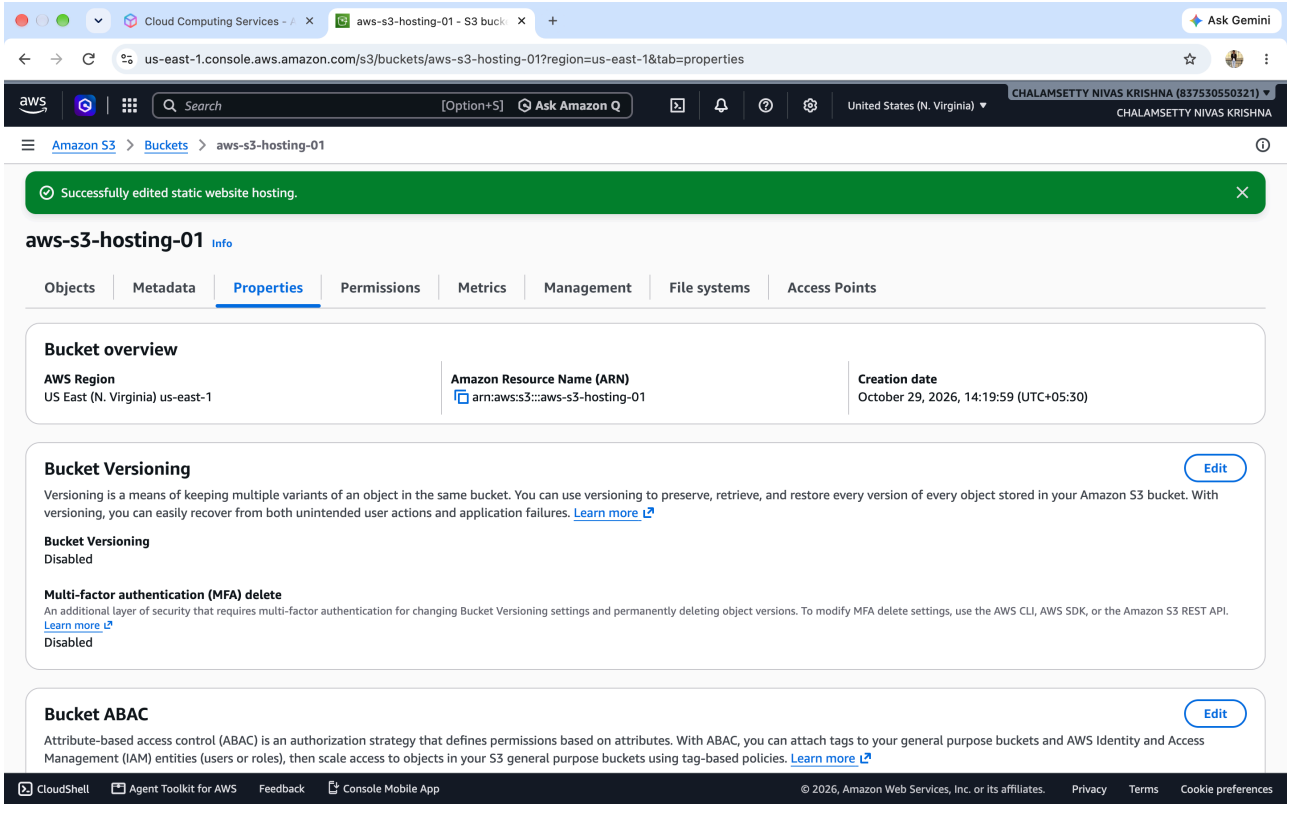

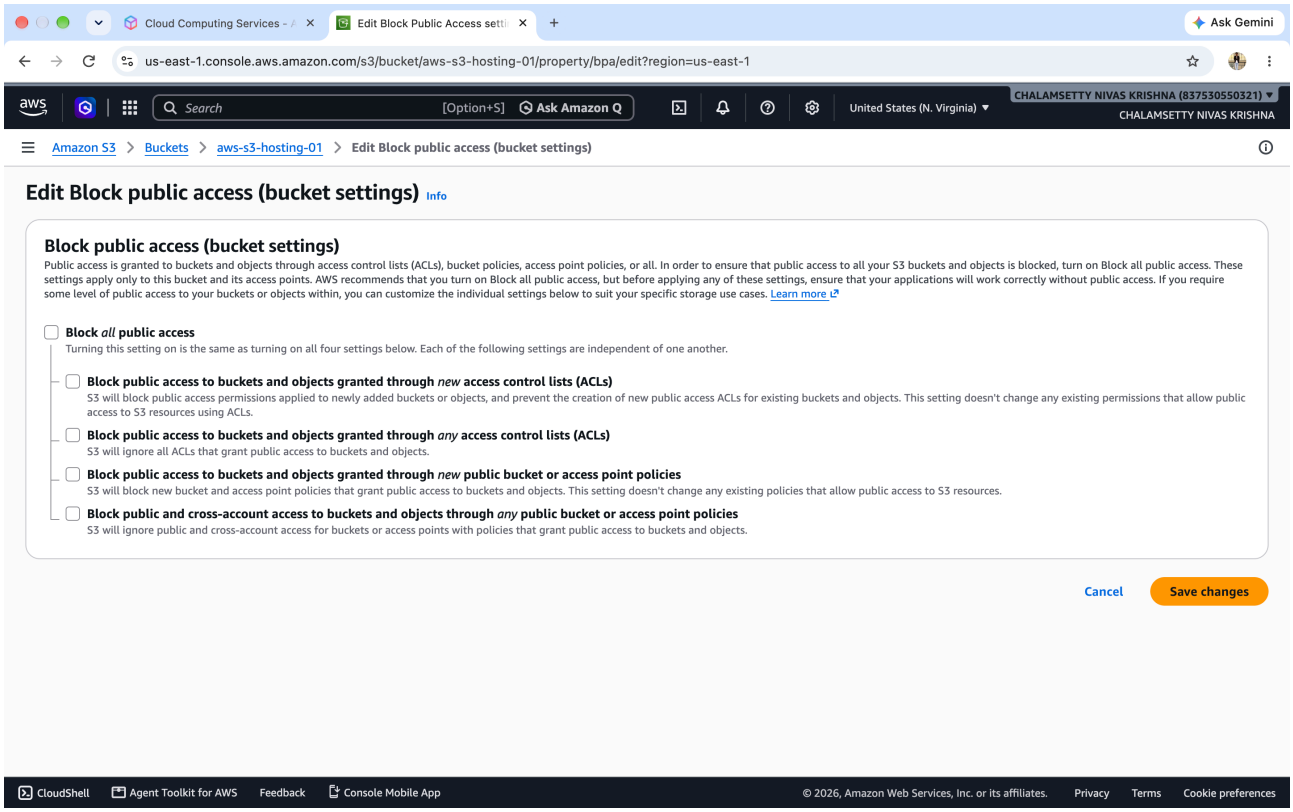

Enable static website hosting

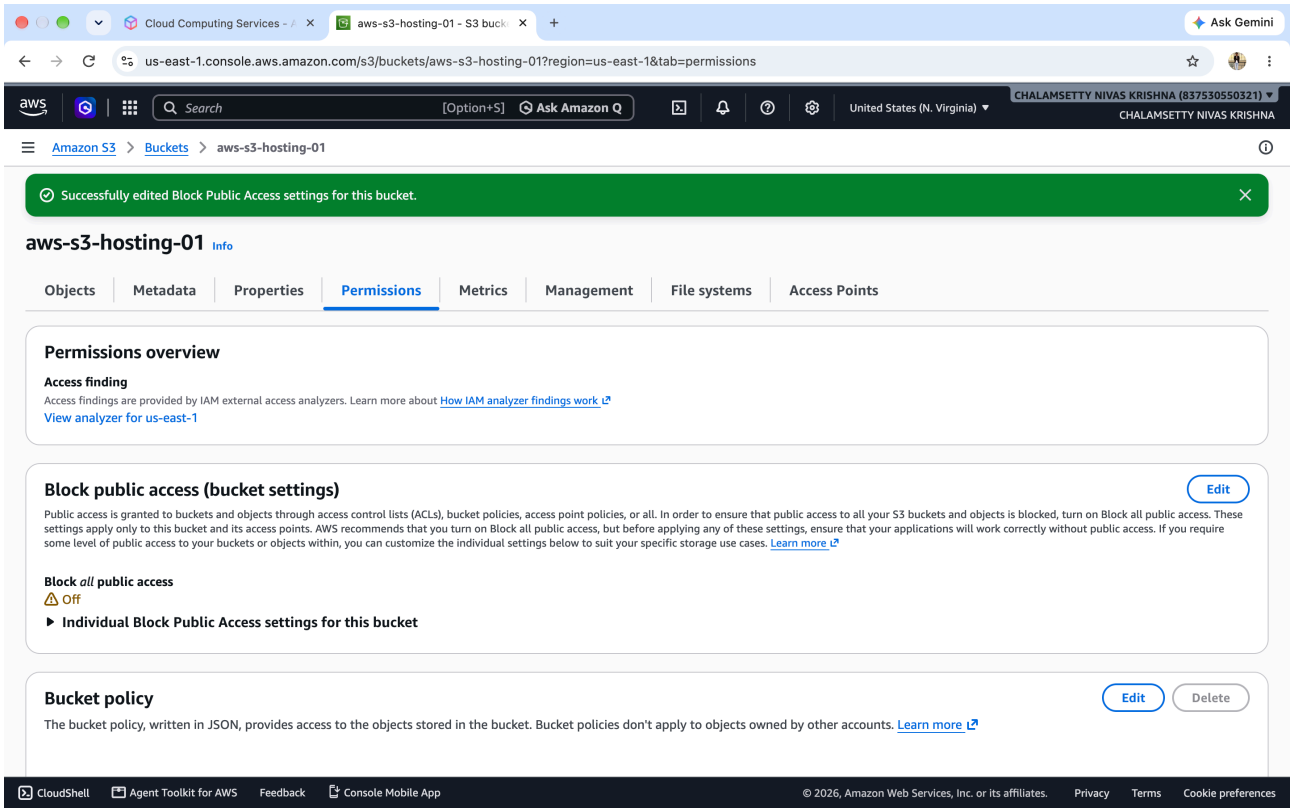

Open your bucket.
Select Properties.
Scroll to Static website hosting.
Choose Host a static website.
Set the Index document to `index.html`.

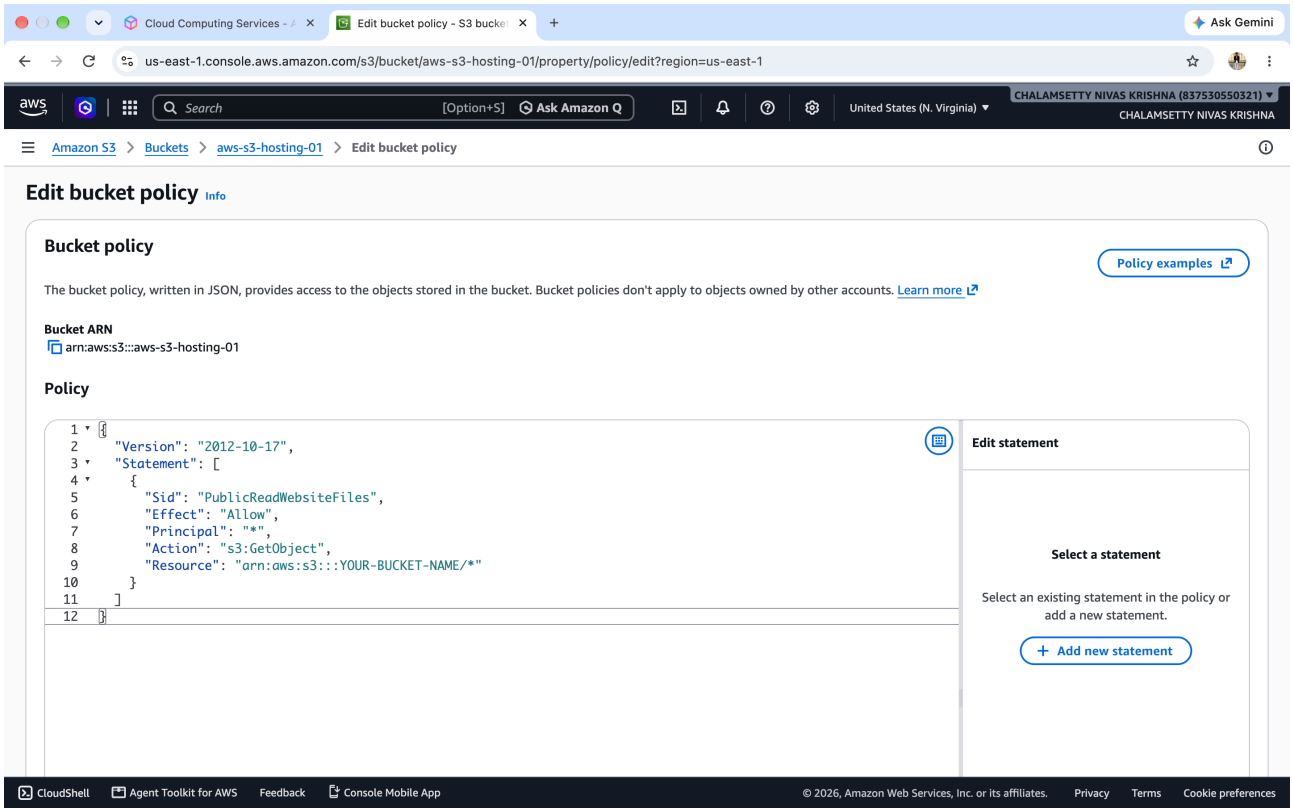

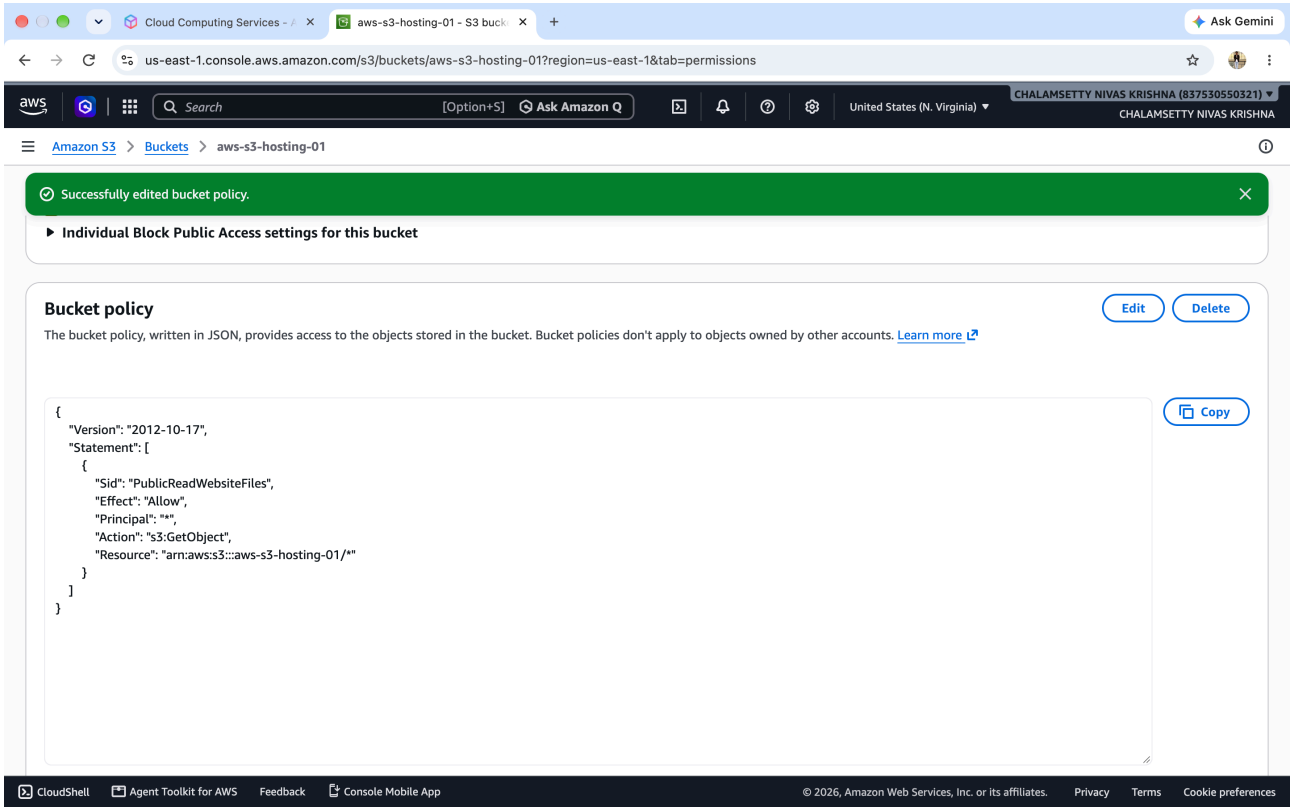

Configure public access

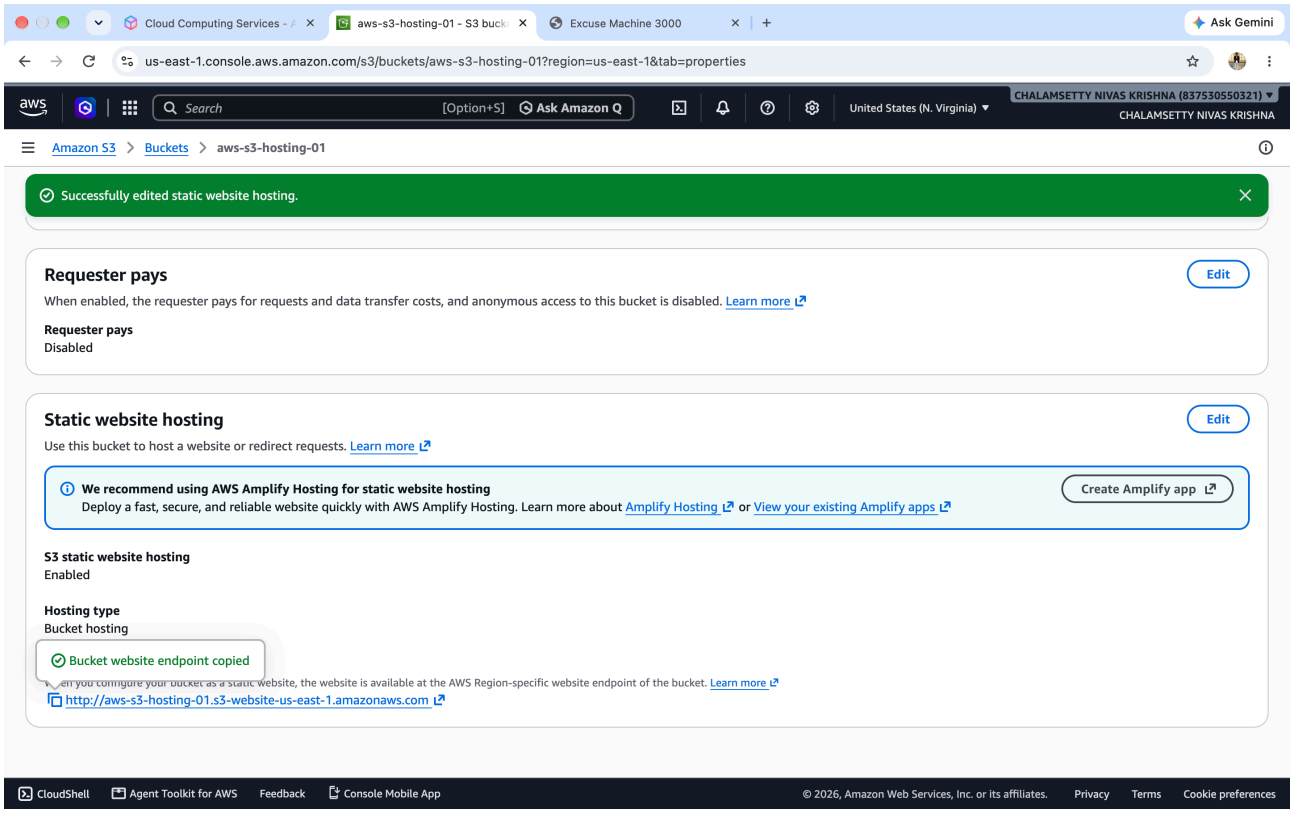

Add a bucket policy

Open your website

Return to Properties → Static website hosting and copy the Bucket website endpoint.

FINAL OUTPUT
